Mutsa's scenario activity for her course "Data Literacy and Communication."

SUMMARY

Professors Without Borders sent three professors from Belgium, Germany, and South Africa to upskill secondary school educators across Freetown, Sierra Leone. The courses targeted data literacy and communication, the art of online instruction, and differentiation and personalisation in education. Over 70 local teachers attended this programme and the participants will go on to share their new knowledge with their colleagues.

Dr. Munda Lebbie delivering the opening ceremony speech.

Professors Without Borders' volunteers with MYCRO's team.

Participants learning how to incorporate phones and online tools into their teaching with Kasia Hanula-Bobbitt.

REFLECTION

“I feel fulfilled and grateful for going through the five-day course on very important modules namely: Differentiation and personalisation; Online excellence and Data literacy and communication. These courses have uplifted my academic and teaching skills to a more excellent level which I will use to impact the learning excellence of my students.”

Umarr Koroma, Learner

WWW.PROWIBO.ORG

“All the sessions impacted me a lot and I have got new ideas and methods of passing on my message to the students I am teaching. The programme has taught me some new skills on technology and also in data collection especially when using a chart to illustrate your information. I learnt new games that are very much interesting and educative to me. I learnt also the benefits of using technology in the classroom...”
